

In 2007 Learning Prep School was a proud recipient of grant monies from the Sean McDonough Charitable Foundation, Inc. The objective of this Technological Professional Development was to stimulate student's visual, auditory, sensory motor, and cognitive skills using modern day technology. This new technology provided the opportunity for creativity while fostering enthusiasm in both the staff and students of Learning Prep School. It also led to an elevated sense of ownership as expressed by the students. The equipment allowed the students to contribute to developing their own curriculum alongside their teachers as well as bring their learning experiences to life. We are eternally grateful for this equipment and going forward we intend to expand the staff's knowledge of how to implement new programs with this available technology.
